

With a UK based call centre, regional engineering hubs and a nationwide network of over 100 specialised engineers CMS was uniquely placed to be able to support Travelodge teams with a four-hour engineer on-site service level agreement covering gas systems, boiler plant, heating and ventilation (HVAC), hot and cold water systems, electrical installations and catering appliances.

Fully insured

The hotel sector remains highly competitive with fierce competition for sites, clients and occupancy. Typically, incumbents compete on price and service with many operators offering a good night. Pressure on RevPAR rates inevitably means that hotels and operators cannot afford building

systems and plant to fail when they are most needed. Whether this is bar systems, catering equipment or the main building plant and associated systems operational reliability is a priority.

Mobile reserve plant rooms

CMS has developed a range of mobile plant rooms in the 200 to 500kW range. Mounted in purpose built lightweight, sound attenuated, road towable trailers the units are designed and built for rapid deployment in the case of plant failure or for use during replacement works.

200 - 500kW output

Trailer mounted, road ready

Rapid deployment

Mounted in a lightweight trailer the units can be towed to site with no requirement for specialist vehicles (Hiab or load bed) behind a midi van and can still access restricted and congested sites when necessary.

Powered by cylindered LPG gas which is widely available nationwide the units can be deployed across the UK within 24hrs.

Each boiler is fitted with 4G enabled telemetry allowing remote control and monitoring of systems, state of the art boiler componentry delivering super high efficiency and operate at very low dB levels ensuring minimal disturbance.

at any location across the UK within 24hrs.

CMS currently operates four of these units on behalf of major clients.
